

Using Material of High Quality

Instructions for the installation of cable

11생산일자 표시(Marking production Date).

The CPS cable chain shows the production date on the outside of each link on the side band.

2 조립및 분해가 매우쉽게 제작(Designed to assemble and disassmble each link simply).

The CPS cable chains are designed with a single pivot pin, which reduces the time for both installation & repair.

3 저분진(Low-mote design).

The CPS cable chain is especially designed to be link less with no frictional parts to minimise.

4저소음(Low-noise design).

The CPS cable chain is especially designed as link-less type with no friction parts to decrease the noise.

(Nylon frames for all type of cable chains).

Using Nylon frames is more convanient than aluminum rod frames. Using nylon frames eliminates the chance of rods becoming detached from the side frame, also reduces setting up time and protects against abrasion & disentangled apperance of a bolt.

6 (Expansion of interior space).

The CPS cable chains are designed to expand inner height in order to use longer self supporting length.

(One pivot pin connection).

Link connecting style has been changed three pin type to one pin type. In case of three pin type, the cable chains were hung down and got a damage both the cable chains and cables inside when the chains overloaded. Since one pin type takes each link's course to same direction, that makes chains are raising the cohesion and it can bear a strong shock from the outside as well as overcome hanging down. Also this type of pin is easily assembled and disassembled with a simple tool.

(Poke Pin style for Link connecting).

Link connecting style(half in out) is widely used. However, CPS cable chain selects Poke Pin connecting style, since there is no come off each link when get twisted. By this reason, CPS cable chain keep up its life time longer than other brand chains and have a reputation for the quality from many engineers in Hyundai Motors, Kia Motors and Daewoo Motors.

Using Material of High Quality

Instructions for the installation of cable

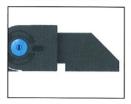

의슬라이드타입 체인-스키드 분해,조립간단 (Slide type-skid).

CPS developed new type of skid for slide type cable chains. This skid

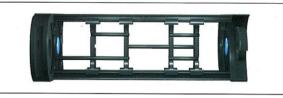

can be assembled with a screwdriver very simply, so that can reduce time for repair as well as reduce the coefficient of friction, giving a unevenness method to the bottom of skid.

일체형 브라켓(End Bracket- One united body style).

CPS end breakets designed one united body style, so it's more stable and stronger than connecting with bolt. Sometimes, customers use the end bracket which is inserted, not fixed with the cable chain. In this case, it can be found the bracket come off from the side band. Only CPS end bracket solve these all problems.

■Separator의 다양화 실현 (Various kind of Separators).

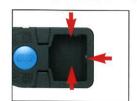

In order to install mulipule cables, hoses with different diameter inside of the chain, seperators can be used to create variatble sized compartments to accomadate your particular cable, hose requirements.

☑ 스토퍼 적용 (Stoper).

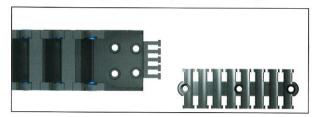

This item control the position of divider and fixing the location, it can be applied to the frame accordingly by the width.

B Easy 브라켓 (Easy End Bracket).

The Easy Bracket of CPS can be fixed on all directions such as up, down & side.

14Tiewrap 브라켓 (Tiewrap end bracket).

Tiewrap type end bracket developed in order to fix the cables, hoses on the bracket of each moving point and fixing point. Tiewrap is combined with end bracket for small size cable chain. In case of big size cable chain, the tiewrap is separated from its end bracket, since the cables or hoses have to be fixed into a distance of about 20~30x outer diameter of cable backward. This method well as prevents cables inside of chain get tangled.

Using Material of High Quality

Chain Request for selecting sorts

Selecting criterion for cable chain

1. STROKE(total traveling distance of the equipment): Judge whether chain for selecting droops or not.

2. Bending Radius(곡률반경) R

Rotation diameter of chain must be bigger than the biggest one of cables or hoses to be in the cable chain.

R min > $8\sim10\times$ Cable outer diameter R min > $15\sim20\times$ Hose outer diameter

3. Internal size of chain

Select sorts of chain by checking inserted cable q'ty and diameter. Slect the internal size of chain after selecting 1,2

4. The length of chain

Must select the length of chain by checking the starting point of chain when traveling.

Calculation of the length for chain

$$L = LS/2 + LP (LP = \pi \times R + 4P)$$

L: The length of chain LS/2: The half of total stroke

LS: Total stroke, total traveling distance of the equipment

LP; Loop length P: Length of each pitch

 π : 3.14 R: Bending radius of chain

Calculation of the heigth of installation for chain

$$H = 2R + B$$

H: Length of the upper end & lower end for chain when forming round (Round 형성시 체인 상부끝과 하부끝의 총 길이)

R: Bending radius of chain

B: The height for outer width for chain

체인설치시 적정 높이: H + @ @: 체인사양에 따라 변동 (ex. CPS068N, CPS077N은 +40mm)

Proper height of installing chain: H + @ @: It depends on the sort of chain(ex. CPS068N,077N =+40mm)

Calculation of the bending radius for cable chain

$$R = (H - B)/2$$

Firstly checking the total height of chain, and then subtract the height of outer height from it, Finally divide it by 2.

Using Material of High Quality

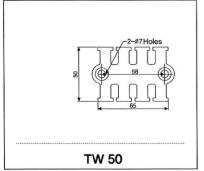

Tiewrap System

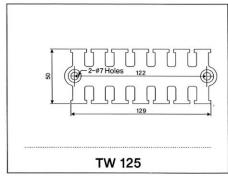

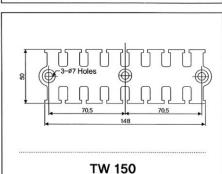

Tiewrap System (케이블 고정 시스템)

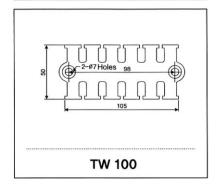

The cables and hoses should be fixed a backward from 30mm X maximum diameter of cable or hose in moving point so as to block up cutting the cables or hoses when move cable chain.

Tiewrap system is a valuable tool for fixing the cables or hoses which installed in the cable chain.

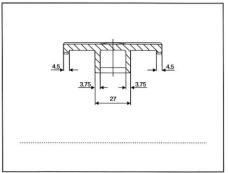

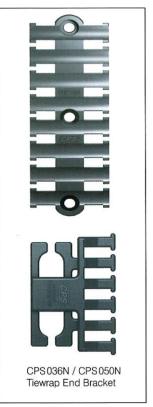

TW 75

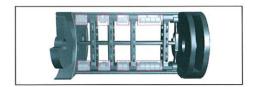

Using Material of High Quality

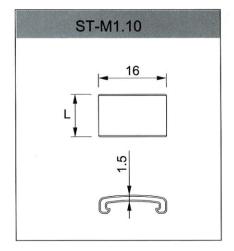

Stoper System

Stoper System (디바이더 고정 시스템)

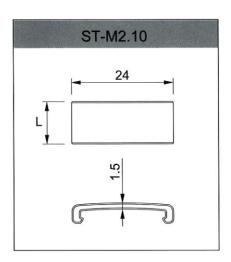

Stoper fixing the location of divider which is settled in side of cable chain and control the position of divider by the inserted cable's size and quantity.

Interior Section

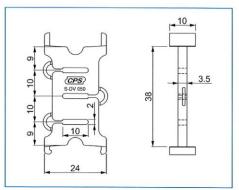

TIPD

Dividers & Separator are differently installed into the inside of cable chain depending on number & size of cable and inside space of cable chain can be divided into max.4 story by separator.

Dividers: Type DV050

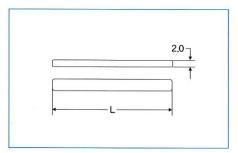

TIPI

Installing dividers enables cables to divide from each other and also prevent them tangling together.

Separators

Туре	Length (L) / mm
S-SP/M.050	50
S-SP/M.075	75
S-SP/M.100	100
S-SP/M.125	125
S-SP/M.150	- 150

TIP!

The inserted separators into dividers have the function that separate cables and lessen the interference of cables so as to prevent them tangling and disconnection.
